Mission, vision and strategy of higher educational institution Fizioterapevtika

MISSION

Higher educational institution Fizioterapevtika is reinforcing the community of professors, researchers, students and other associates and is also striving for its recognition at home and broader in Europe. Its research, education and professional activities is based on the following values:

- To ensure the highest quality and excellency possible
- Academic freedom for its associates and students, particularly creativity freedom
- Ethical and responsible relations between people, society and environment

To stop perceiving physiotherapy only as a list of exercises and procedures, but also as a scientifically based profession, we have to put effort into expansion of specific knowledge and into development of own standards for practice and education. Therefore Fizioterapevtika has orientated its mission and vision on this particular field. In recent years, physiotherapy has become a dynamic profession, which is rapidly evolving alongside biomedical science. Because of this, physiotherapeutical procedures need to be based on scientific principles, be scientifically accurate with the ability to be provable. In the EU and broader around the world, physiotherapy has become an academic study with its own research institutions and excellent publications of its findings.

VISION

Higher educational institution Fizioterapevtika with its quality programme of education and research is training excellent staff for taking on difficult assignments and work in the field of physiotherapy.

STRATEGY

Higher educational institution Fizioterapevtika is becoming a exemplary higher educational institution and is fulfiling its vision primarily by its efforts and care for excellency, both in the educational and research fields. The management of Fizioterapevtika wants to exceed the expectations of students and society. With its achievements and work, Fizioterapevtika is directed towards business excellence and satisfaction of students, employees and patients.

Higher educational institution Fizioterapevtika will collaborate with different professionals from the field of economy, social-development sphere, medicine, social gerontology and others in the form of research teams and groups. It will research important questions regarding the region in which it will be actively included. Special attention will be diverted towards current questions and problems of social and health care politics, which are connected to physiotherapy. Physiotherapy is becoming more
and more recognised in the scientific-research field, where it proves the positive effects of physiotherapeutical procedures on the speed of patient rehabilitation.

In cooperation with domestic institutions (research institutions and health care organizations) we will conduct researches, which will analyze the state in the Slovene region. Higher educational institution Fizioterapevtika will try to deepen the scientific-research activity and cooperate in projects, which are connected with foreign and domestic research institutions.

The efforts of Fizioterapevtika to fulfill its vision until the year 2020 are based on the following:

- The usage and adjustment of modern didactical aids, methods and forms of teaching in different courses
- Qualification of students for taking on responsible tasks and for direct work with patients and others, which will contribute to the general development of healthcare in the region
- Organizing additional educational courses and encouragement of self-education of professionals and other workers, along with constant following of the discipline both abroad and domestically
- Providing access to the latest available literature, both in the library and online, for students and teachers
- Constant monitoring of the quality of education, improvement
- Joining and cooperating in foreign and domestic projects
- Collaboration of foreign and domestic experts in the educational process
- Active cooperation with the environment and informing the public about its activities
- Assuring a friendly and motivational study environment both for students and staff

Higher educational institution Fizioterapevtika will fulfill its vision and strategy with clearly set goals in the development of the institution and with concretely set assignments, which are part of the yearly work plan. This activity will also be supported with appropriate staff hiring.
